1. B pointers are not there in java
2. C keywords such as static cannot be used as variable name
3. C
4. C
5. D
6. C because interfaces cannot be instantiated
7. A command line arguments are stored as an array of string
8. A
9. C
10. B
11. D
12. D
13. C since the variable x is already defined
14. A main method is executed by the JVM first
15. D
16. B x/0 will not be executed because of short circuiting
17. D This is a wrong question and will result in an error since there is no volume property defined on the area objec
t. If we assume that there is the volume property then the answer will be 30
18 [Access Modifier] [keyword such as static, final] return_type function_Name([optional parameters])
Everything mentioned between [] is optional. The only requirements are return_type and function_name
